**Subject:** FW: List of Questions for tomorrows hearing

- #1. Update on latest for ITC
- #2. Regulatory tools that TCEQ has for response to these disasters
- #3. Want to know the extent of how far the lawsuit can go- they have read a report that states up to \$100,000.00.
- #4. What kind of administrative tools have been given to get them into compliance
- #5. What is TCEQ's jurisdiction to an incident/plant like this. Comments such as: Issues about layout of tank, issue of foam used, do they have to submit the layout and water pressure.
- #6. What type of permit(s) do they need for a type of plant such as ITC?
- #7. Want to discuss past violations and what the consequence were with those violations. Did any of the violations involve any tanks that caught fire or the operations of those tanks.
